

Orga Systems shortlisted for World Communication Awards

Pressemitteilung von: **Orga Systems GmbH**
Datum: **11.09.2008 – 12:26 Uhr**
Rubrik: **Wirtschaft**

(fair-NEWS) – Research project nominated for the Best Technology Foresight

Orga Systems, leading provider of convergent real-time billing, is delighted to be short listed at the Total Telecoms' World Communication Awards 2008. The innovative research project Local Mobile Services (LOMS) is seen as one of the Best Technology Foresights.

Orga Systems is contributing to the development of groundbreaking technologies within the LOMS project. In particular, Orga Systems has developed a new billing method for online charging of context-aware mobile services. Innovative interfaces allow for local providers to offer their customers such kind of context-aware services while using preexisting billing systems. Billing expenditures are minimized by printing only one bill for all services used– independent from the provider. Interfaces are defined with regards to international standards like IP Multimedia Subsystem (IMS) and Parlay X.

To simplify the development and deployment of mobile location-dependent services through innovative methods and tools is what the project longs for. It enables raising efficiency during the entire development process of context-aware mobile services and is specifically targeted on giving small and medium-sized companies the opportunity to offer these services.

Orga Systems is committed to progress next generation products and customer-specific solutions in cooperative research projects. With a dedicated team of onsite researchers and developers, Orga Systems is continuously looking to explore future technologies in cooperation with experts from related industries. Participation in international projects allows Orga Systems to stay ahead of emerging market trends.

About Orga Systems

Orga Systems is a leading expert in mission critical, convergent real-time billing. Our products enable international telecommunications companies to rate, charge and bill any service for prepaid, postpaid and hybrid subscribers.

Experts in Germany, Italy, Spain, Turkey, the Ukraine, Brazil and Malaysia create cost-effective, tailor-made solutions based on highly flexible products and high performance technologies.

Orga Systems Convergence Program™ includes a complete portfolio of pre-integrated, world-class products by Orga Systems and partners. Orga Systems' professional customer and system integration services top off the solution bundle. With the modular pre-integration of third party products, Orga Systems supplies solutions that transcend the "one size fits all" approach other providers offer. Instead, a customized, flexible package is guaranteed for each individual project.

About LOMS:

The main focus of the LOMS project rests on researching methods and tools for the development, deployment and practical use of context-oriented mobile services.

LOMS (Local Mobile Services) is an ITEA project. Partners from Belgium, Germany and Spain all contribute to this project.

For more information, go to: <http://www.loms-itea.org>

About ITEA:

ITEA is a Pan-European strategic program for pioneering high-tech research and development of software-based systems and services. ITEA stimulates and supports projects that will give the European industry a lead in the area of SiS (Software Intensive Systems, in which software represents a significant part of system functionality and is responsible for a large portion of system development costs, risks and time).
